

# A NEST TODAY CAN BE AN OUTAGE TOMORROW.

## ASSET HEALTH MANAGEMENT: Bird Nesting & Foreign Object Intrusion

**B**ird nesting and foreign objects such as debris, balloons, or loose materials can create serious reliability risks for overhead power infrastructure. These intrusions can lead to short circuits, equipment damage, and unexpected outages if left unnoticed. Using Solis Energy's edge infrastructure platform, utilities can deploy reliable remote monitoring to identify nesting activity and foreign objects early —helping maintenance teams respond quickly and protect critical grid assets.

## SOLUTION BENEFITS

- Early detection of nesting activity
- Foreign object visibility
- Reliable and resilient monitoring
- Reduced field inspections
- Improved grid reliability

**POWER WHEN YOU NEED IT.**
