

WHEN THE POLE STARTS TO LEAN YOU NEED TO KNOW.

ASSET HEALTH MANAGEMENT: Pole Tilt & Structural Monitoring

Utility poles can gradually shift or suddenly lean due to storms, soil erosion, vehicle impacts, or structural degradation. Left unnoticed, pole tilt can compromise line clearance, stress conductors, and create serious safety risks. Using Solis Energy's edge infrastructure platform, operators can deploy reliable remote monitoring systems that maintain visibility of pole conditions and help utilities teams spot developing pole issues early instead of discovering them after damage occurs.

SOLUTION BENEFITS

- Early detection of structural movement
- Reliable and resilient monitoring
- Faster response to storm or impact damage
- Remote visibility of field assets
- Improved infrastructure security

POWER WHEN YOU NEED IT.
