

DETECT OVERHEATING & OIL LEAKS

BEFORE THEY CAUSE OUTAGES.

ASSET HEALTH MANAGEMENT: Transformer Monitoring

Power transformers are among the most critical assets in the electrical grid. Early warning signs such as overheating, oil leaks, or abnormal physical conditions—can quickly escalate into costly outages, equipment damage, or safety risks if they go unnoticed. By integrating Solis Energy's edge infrastructure platform, utilities can deploy reliable remote monitoring that keeps transformers under continuous visual inspection, enabling teams to detect issues sooner and respond before minor anomalies become major disruptions.

SOLUTION BENEFITS

- Early detection of equipment failures
- Reliable and resilient monitoring
- High-resolution visual inspection
- Reliable wireless backhaul
- Improved asset health management

POWER WHEN YOU NEED IT.
